

# INSOL<sup>SM</sup> UAW

InSol UAW Asphaltene/Wax Umbilical Grade Inhibitor is a pioneer and unique (the only one of its kind on the world oil field market) asphaltene/wax chemical 100% compatible with Methanol and Glycols. It is especially suitable for treating gas condensate systems that are usually soaked in Methanol or Glycol to prevent hydrate formation, but it is also excellent for oils where continuous treatment of both wax and hydrate is necessary. Also, visit our web site at [www.kostatech.com](http://www.kostatech.com) for more information on two related products: InSol UH Hydrate Anti-Agglomerant Low Dosage Hydrate Inhibitor (LDHI) and InSol UAWH Asphaltene-Wax-Hydrate Inhibitor, the only complete product to treat Asphaltene-Wax-Hydrate problems simultaneously through a single chemical injection line. Also, InSol UAWSI and InSol UWSI are two products used for pipeline soak and flow-clean operations.
