Citric Acid

Description:

Citric Acid is dry white crystalline powder primarily used for lowering the pH of aqueous solutions.

Application:

Citric Acid is designed to lower the pH of fresh and brine waters. This product is applicable for dispersion of Xanvis polymer in water and subsequently raising the pH of slurries by caustic or other additives. Under normal conditions, 0.25lb/bbl of slurry is required to lower the pH in a range of 2-3.

Shipping and Handling Instructions:

Citric Acid is available in 50lb bags. A Material Safety Data Sheet outlining recommended safe handling of **Citric Acid** is available upon request.
